

Enable. Engineer. Elevate.

Lerch Bates, the Built Environment's trusted leader in technical consulting for 80+ years, delivers integrated design & engineering architectural services as **studio|LB**.

studio|LB combines the façade and structural engineering expertise of our acquired company, Studio_NYL, with LB's renowned multidisciplinary Total Building Performance™ capabilities to deliver integrated, high-performance design solutions with three commitments: Enable. Engineer. Elevate.

ENABLE

Empowering Architects to realize ambitious design intent through creativity, clarity and technical guidance.

ENGINEER

Delivering innovative and constructable solutions that perform in the real world—technically, environmentally and economically.

ELEVATE

Raising performance, collaboration and the Built Environment through design-driven technical Insights and client-focused partnership.

Approach

At **studio|LB** we love to hear—on day one—all of our partner's project aspirations. We look for opportunities, rather than making compromises. We believe in imagining creative solutions to ensure a project gets built. We do not approach designs the way a project was done before. Instead, we delight in the problem-solving process.

What We Do

studio|LB reinforces Lerch Bates's leadership in integrated multidisciplinary consulting—combining expertise across all six sides of your building. This coordinated platform gives architects and developers a single partner capable of addressing the complexity of modern buildings—from ambitious aesthetics to rigorous technical performance.
